# San Francisco Bay Area 2020 Median House Sales Prices

From Napa & Sonoma Counties in the north  
to Monterey County in the south

Bay Area home prices are also mapped online:

<https://www.bayareamarketreports.com/trend/san-francisco-bay-area-home-prices-by-city>

**Many factors affect home values:** quality of location *within* the market area, architectural style and curb appeal, square footage, condition, views, amenities, extra rooms, parking, decks and yards, privacy, lot size, demographics, environmental factors, and so on. There is usually a wide or even vast variety of homes within market areas, especially larger ones.

Median values are those at which half the sales occurred for more and half for less. By definition, statistics are broad generalities that typically “summarize” a wide variety of disparate data in the underlying individual transactions. **Median values can be affected by a variety of factors unrelated to fair market value, and anomalous fluctuations are common**, especially in smaller and/or very expensive markets over shorter time periods. **How these statistics apply to any particular property is unknown without a specific comparative market analysis.** Median house sales values for Napa and Sonoma Counties in this analysis were limited to homes on lots of 2 acres or less. Not every town or city within the Bay Area is included in this list.

Median house sales values as reported to MLS for 2020. Not all sales are reported to MLS. “Market area” in this report may be a city, town, MLS area or neighborhood, which vary widely in size. Data from sources deemed reliable but may contain errors and subject to revision. All numbers are approximate.

Compass San Francisco Bay Area Reports: <https://www.bayareamarketreports.com/>

**It is impossible to know how median and average value statistics apply to any particular home without a specific comparative market analysis. Many factors affect sales prices besides neighborhood/ bedroom count: quality of location *within* the neighborhood, condition, size, architecture, views, amenities, parking, outdoor space, etc. Median house sales prices for Napa and Sonoma Counties in this analysis were limited to homes on lots of 2 acres or less.**

These analyses were made in good faith with data from sources deemed reliable, but may contain errors and are subject to revision. It is not our intent to convince you of a particular position, but to attempt to provide straightforward data and analysis, so you can make your own informed decisions. Median and average statistics are enormous generalities: There are hundreds of different markets the Bay Area, each with its own unique dynamics. Median prices and dollar per square foot values can be and often are affected by other factors besides changes in fair market value. Longer term trends are much more meaningful than short-term.
